

Python for Linguists 2023

Quiz for week 3

Name: _____

Write a program that does the following:

1. It asks the user to enter their age in years, getting their input.
2. It prints whether their age is an even or an odd number.
3. It prints whether their age has an even digit or not (e.g., 27 has an even digit, namely 2).

Notes:

- You may assume the age will have exactly two digits.

Example:

```
Enter your age: 25
Your age is odd.
It has an even digit.
```
